**The Attitudes of Sport Science Colleges' Students toward Learning
Swimming Skills and Their relationship with Academic Achievements**

Jamal Rababah

Ali Abu Zama

Abstract

This study aimed at identifying attitudes of Sport Science Colleges' students toward learning some swimming skills and the relationship between learning these swimming skills and academic achievement test. Moreover, it aims at investigating the nature of the differences in learning some swimming skills and their relationship with academic achievements according to gender. The researchers designed a questionnaire that contains 27 items to achieve the purposes to this study. The number of students participated in this study was 69 male and female students.

The results of the study revealed positive attitudes toward learning swimming skills. Regarding gender, the results showed no significant differences. However, there were significant differences between male and female students in regard to the academic achievement test.
